

Technology

Patented Technology

Highly sensitive to changes in culture density.
Testing multiple antibiotic at the same time

Testing Instrument

Sample cassette

Laser diffractions

Image analysis

Phenotypic growth

In all aspects bacteria are **highly variant** in :

- Morphology
- Biochemistry
- Metabolism
- Enzymatic activity...

Bacterial shapes and arrangements

PhenofAST has managed to identified the only **non-variant** property, common to all bacteria cells: The light **index of refraction**, directly traced through laser diffraction images

Low Cost

No need to pay \$200 per lab test results.

Our test kits are made affordable by **not** using any expensive and delicate biochemicals, enzymes, ligands, antibodies or molecular probes

Wide range of disease

No need to stack the lab with different instruments. We detect culture growth across multiple disease and infections.
